

Growth is achieved with Innovative ideas and a great minding.

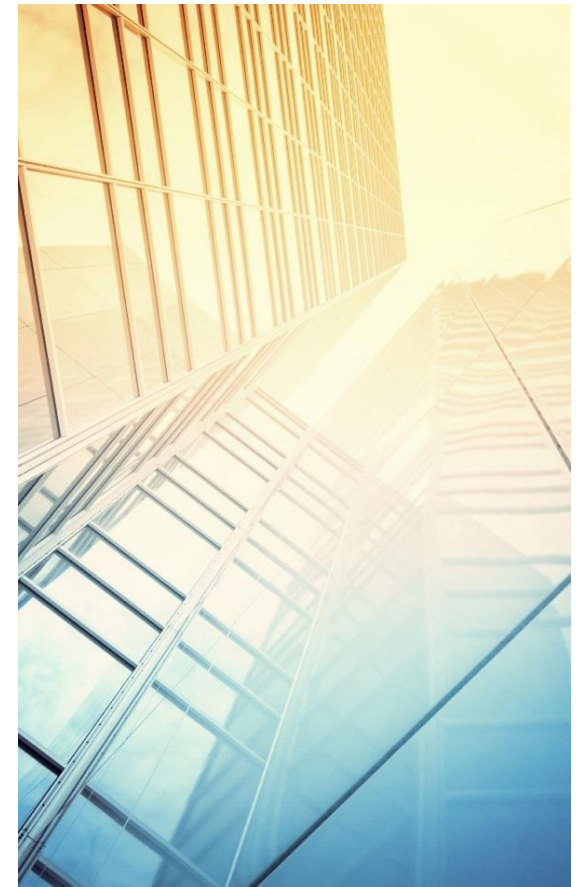

To fill the void of in monitored cycles, proper agendas with broad view of various disciplines, skills and connections are required.

An act with a purpose matters for the products and processes to work in a sustainable way.

Challenges
Challenge Your Limit
”

Green Hydrogen System

We provide service on production of green hydrogen that uses non-conventional energy sources for electrolysis process on water to create hydrogen in a low-cost zero-emission fuel.

Effective, Result-driven, Innovative Solutions with speed tracking

Our innovative solutions enable industrial leaders to achieve business objective, enhance production and systematically improve performance day by day. We guarantee the highest levels of assurance and satisfaction through a profound set promise to our customers with the help of advanced technologies.

IPOT (Intelligence Process Optimization Team)

This team consists of experience people from the related industries which analyses daily data from plant and find out best possible solution to clients query and problems. This team provide the possible ways to increase plant productivity, reduce energy consumption, safety related issues, future CAPEX project consideration, etc. With the help of modeling, simulations and experience.

Energy and environment sustainable projects

We provide projects which can help companies to attend zero emission by using energy saving measures and solar design implementation that promise high return on investment.

Pre-Effluent Treatment Solutions

We have considerable approach of providing solutions prior to the effluent treatment plant which will increase the overall yield of product, reduce product cost, Energy reduction, Zero Liquid Discharge , etc.

Analytical Techniques

We provide solutions based on client requirements ,Ex- If client have an issue in particular heat exchanger fouling, we can provide solutions to the client by which we can help them to increase its run length and to planned maintenance schedule. We are experience people in this technique which is proven benefits to the industries. We have successfully developed this technique for distillation column, heat exchanger, boiler, reactor, etc.

Defoamer, Descaler and antiscalant system

We are chemical agent providers for effluent treatment plant based on system analysis. Also, we help industries to optimize defoamer and descaler operations in the consideration of safety, reduced human interference and economic reduction.
